

PAS-X Savvy

update 2/2021: automate repetitive writing

As important as comprehensive and detailed reports are, few like to create them in the everyday work. Reports are often build of repetitive text parts, need the time-consuming creation of plots, decrease the motivation of authors and slow down processes. PAS-X Savvy (previously inCygnt) assists you to reduce time for report creation while keeping up a high quality with the Reports extension module.

Choose your very own word template to meet the corporate identity specifications and add and rearrange predefined text blocks, tables and plots via drag & drop in the software.

Save time when data changes, updates or new values are available! All plots and tables are updated automatically according to your template settings – no need to manually change a lot of plots between text parts or to search for one measurement in few tables!

Download the created report as a .docx file and only give it your finishing touch before you are ready. Let PAS-X Savvy do the repetitive work for you, so you can continue on the exciting parts of your everyday work.

Werum PAS-X Savvy is the leading real-time bioprocess data analytics software. It has been developed to help users manage, analyze and report bioprocess development, for validation and operational GMP data. PAS-X Savvy can help you integrate all unit operations for the complete product life cycle. Connect your key players and departments such as quality, process development, validation and operations. This ensures safe and robust process design for small and large scale. Accelerate your product commercialization including regulatory filings with PAS-X Savvy. Get the process intelligence and visibility you need to run your biotech processes in real time.
